

ENGINEERED PRODUCTS

ENVIRONMENTAL POLICY

Uniroyal Global Site manufactures a wide range of expanded and solid PVC products for the automotive, contract upholstery and nursery industries.

In order to retain its reputation with the client, Uniroyal Global operates systems to comply with and react positively to the needs of those customers.

The significant environmental aspects associated with these activities include the consumption of energy and raw materials from non-renewable sources, local emissions to atmosphere and the generation of solid and liquid waste products, including both recyclable and non-recyclable inert wastes and special wastes with toxic properties.

The company's aims with respect to the environment are:

- to comply with all existing applicable legal and other requirements at European, National and Local levels that relate to our environmental aspects;
- to minimise waste throughout the Earby site, with better utilisation of raw materials, energy and water;
- to minimise polluting emissions into the environment by prevention at source wherever possible;
- to be committed to continual improvement in environmental performance by the implementation of a planned, co-ordinated management system and by setting clear environmental objectives with regular progress measurement.

Our employees and 'persons working for or on behalf of the company' have a duty to be aware of, and comply with, this policy, and support the Earby site in achieving its environmental objectives.

Environmental objectives and improvement activities are supported by the company's environmental champions

This policy is displayed at various locations throughout the site and is available to the public in the main reception area.
